

## **Acuo Admin Portal**

Intelligent, versatile, powerful.

In healthcare today, managing copious amounts of imaging data from across an enterprise can be daunting. It requires a solution that is intelligent, versatile and powerful to direct the needs of a complex imaging environment. Acuo Admin Portal is a zero-footprint solution that allows administrators and power users to perform at peak efficiency as they manage a wide range of infrastructure features across the Acuo server and application landscape.

The portal allows you to easily assess system health from an intelligent overview. From the overview, links allow you to drill down and quickly address any needed changes to all Acuo servers or a subset of servers simplifying and accelerating change management.

With the Acuo Admin Portal, execution of enterprise level administrative tasks such as manage/build routes, update protected health information (PHI) policies, transparently perform migrations or add new archives, manage crossenterprise document sharing (XDS) registry/repository and unique identifier (UID) conflicts are performed.

The advanced monitoring tools provide real-time information regarding the performance of the Acuo vendor neutral archive (VNA) infrastructure. With this information, problems are quickly identified and implemented for process improvements that optimize performance. In conjunction with the real-time tools, Acuo Admin Portal also provides an advanced data analytics platform that yields powerful insights. Acuo Admin Portal includes the following features:

- Content Explorer: Manage/update XDS and DICOM repositories
- Storage management: Configure, create and retrieve digital assets
- DICOM Migrations: Acuo's built-in DICOM migration tool can help organizations migrate data into the VNA
- Route management: Create and configure routes between application entities and destinations
- Workflow: Manage, move and store jobs between systems
- Advanced enterprise reporting: View/manage analytic data
- Life cycle management: Create data retention policies
- Auditing: Based on IHE standards, Acuo logs user and tasks data
- TagMapper: Configure and deploy maps that modify and normalize data
- Integration management: Manage integrations from HIS/RIS systems providing ADT data and associated events received from an HL7 or DICOM worklist feed. This includes editing and deleting patients or events.
- UID conflict resolution: Resolve storage conflicts
- Advanced system monitoring: Customize alerts to notify administrators of critical errors
- Study de-identification: De-identify studies for research and analytics projects

**Intelligent Dashboard Overview** provides administrators with a system health view to quickly and easily assess the heartbeat of the system.

The **Acuo Route Builder** allows administrators to easily create routes to multiple destinations. The graphical display enables administrators to visualize existing routes.

From the **Acuo dashboard**, administrators can easily gain access to the critical workflows needed to manage and configure their Acuo system.

**Acuo QC** provides administrators access to critical workflows and allows easy access to the clinical data for fast QC and corrections.

## About Hyland

Hyland uniquely empowers organizations with unified access to AI-enabled enterprise content and unstructured data across repositories, unlocking profound insights that fuel innovations – fundamentally redefining how they operate and engage with those they serve. The pioneer of the Content Innovation Cloud<sup>™</sup> — a unified content, process and application intelligence platform — Hyland is trusted by thousands of organizations worldwide, including more than half of the Fortune 100.
