- ✓ Provides consistent document type classification
- ✓ Manages high volumes of diverse formats
- ✓ Improves accuracy and speed

INTELLIGENT MEDRECORDS

Are medical records piling up faster than your staff can address them for ongoing clinician care decisions? Medical records from a variety of sources and in a variety of formats, as well as the push to meet clinician deadlines, can create opportunities for errors and time drains that cost your organization precious time and money.
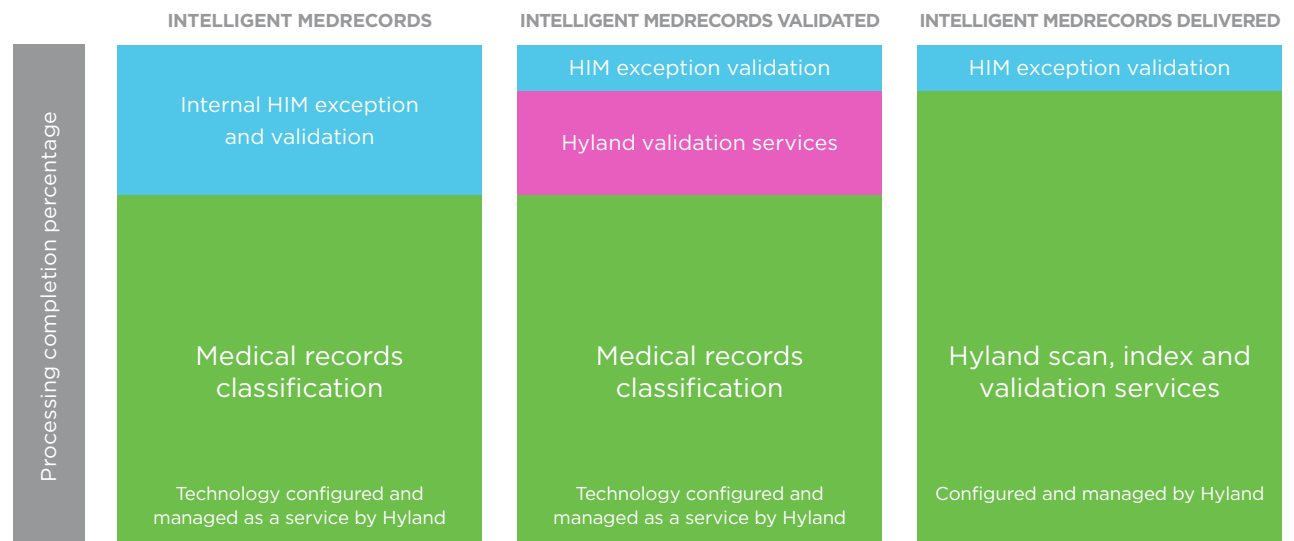

How can your health system better manage and automate medical records classification by leveraging your OnBase enterprise information platform to save staff time and reduce cost?

Hyland's intelligent capture, extraction and validation platform automatically sorts both paper and digital documentation and drives the classified data into OnBase and your electronic medical record (EMR). With this intelligent solution, capture and indexing tasks become automated and simplified, improving patient data accuracy and consistency. This enables your healthcare organization to more efficiently process the entire patient record, regardless of file type or format, within your EMR or enterprise content management (ECM) platform within 24 hours.

CUSTOMIZED SOLUTIONS

Hyland can customize our approach based on your preferences, with you owning as much or as little of the data capture process as your organization sees fit.

Ensure accurate information routes to your EMR quickly while freeing your HIM staff for higher-value work with Intelligent MedRecords.

OPTION 1: INTELLIGENT MEDRECORDS

A software-as-a-service solution to automate medical records classification

Hyland will remotely manage your Intelligent MedRecords solution to automatically classify medical records. Your service delivery manager will provide monthly reports, quarterly business reviews, release management and a staffed service desk to address any issues. Your staff is accountable for scanning any paper documents and reviewing and verifying any exceptions that are not classified by the technology.

OPTION 2: INTELLIGENT MEDRECORDS VALIDATED

The full power of automated medical records classification, plus the addition of human ingenuity to enable validation services for anything that is not classified by Intelligent MedRecords

Hyland will remotely manage your Intelligent MedRecords solution to automatically classify medical records. Your service delivery manager will provide monthly reports, quarterly business reviews, release management and a staffed service desk to address any issues. This solution offering incorporates an exception management service that ensures anything that is not classified by technology, receives human review and accurate indexing. This team also has the ability to spot check records for accuracy and quality.

OPTION 3: INTELLIGENT MEDRECORDS DELIVERED

A fully outsourced medical records classification model that doesn't require a local technology deployment but still enables your organization to drive classification of patient medical records into the system of your choice

We will handle the logistics, including scanning, indexing accuracy and staffing, and absorb the volume ebbs and flows so your staff is free to focus on other priorities.
